# Preface

---

The information in this guide is intended for users who are configuring Actifio Sky for AWS.

After you have configured Actifio Sky for AWS, add the appliance to an AGM and manage the appliance from there. Consult **Getting Started with Actifio Copy Data Management**. It provides detailed instructions on using the unique features of Actifio Sky for AWS. A copy of this guide can be found in the ActifioNOW customer portal.

## The ActifioNOW Customer Portal

From the customer portal you can obtain detailed reports about your appliance, as well as search the portal's knowledge base for answers to specific questions.

To log into the ActifioNOW customer portal:

1. Go to: <https://now.actifio.com>
2. When prompted, enter the user name and password you received after registering for Actifio Sky for AWS.

---

# 1 Introduction

---

Actifio Sky for AWS brings enterprise-class access, agility, and control to data in the Amazon cloud. Actifio Sky for AWS appliances are based on the Actifio's Sky virtual appliance. An Actifio Sky for AWS appliance is a virtual server designed to capture and manage data that resides on the servers in an AWS VPC.

Multiple Actifio Sky for AWS appliances can be deployed and configured. Each Actifio Sky for AWS appliance can capture local application data and replicate copies of the data to other Actifio Sky for AWS appliances.

After you have completed deploying Actifio Sky for AWS, continue to adding the Sky appliance to an AGM. After you have added the appliance, you can manage the appliance from AGM.

## 2 Deploying Actifio Sky from the AWS Marketplace

Use the instructions in this chapter to subscribe to a Sky instance and then launch the Sky appliance from the Amazon marketplace.

**Note:** If you have multiple VPCs, configure your Actifio Sky for AWS appliance in the VPC that contains most of the applications to be protected. Applications that reside outside of the specified VPC can be protected if you provide a peering connection between VPCs via AWS.

This chapter has the following topics:

[Subscribe to an Actifio Sky Appliance Instance from the Marketplace](#) on page 3

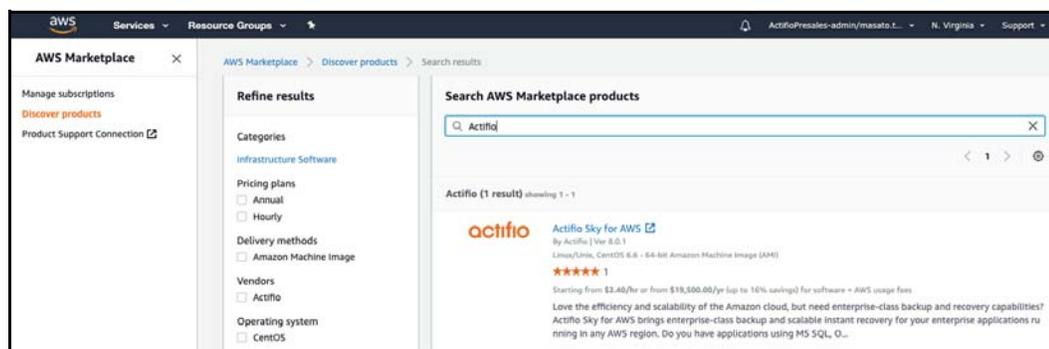

[Launching Actifio Sky for AWS from the Marketplace](#) on page 6

### Subscribe to an Actifio Sky Appliance Instance from the Marketplace

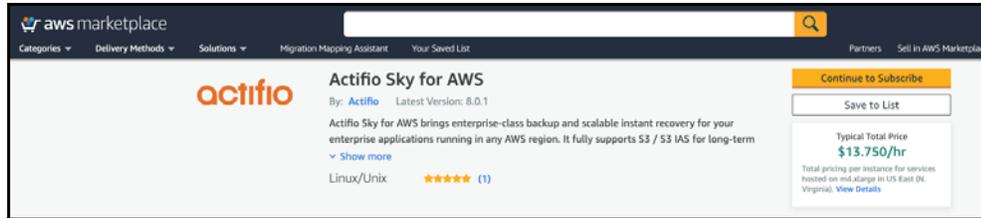

Before you begin, login to the Amazon marketplace.

To subscribe to an Actifio Sky appliance instance:

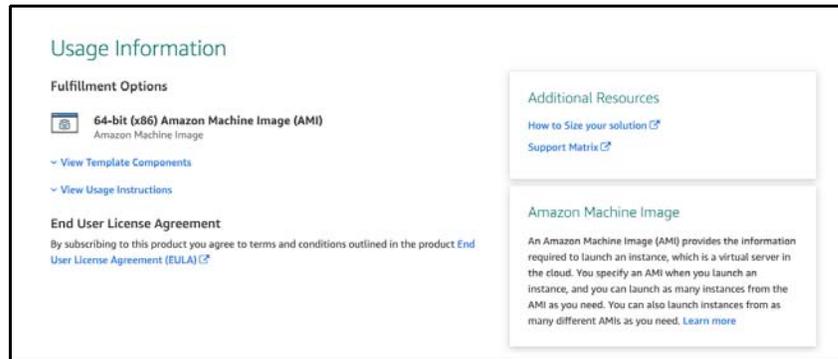

1. In the AWS Marketplace, click **Discover Products**.
2. In the search text box enter Actifio, then click **Search**. You will see the Actifio Sky for AWS product listed.

3. Select from the product to view the product details.
4. Review more information about Actifio's offering with Sky in AWS.

5. Determine the type (size) of instance to deploy. Actifio provides a Solution Calculator that, based on your data requirements, will recommend a specific instance type (size).
  - a. To use the Actifio Solution Calculator, go to **Additional Resources** section and click **How to Size your solution**.

The Actifio Solution Calculator page opens.

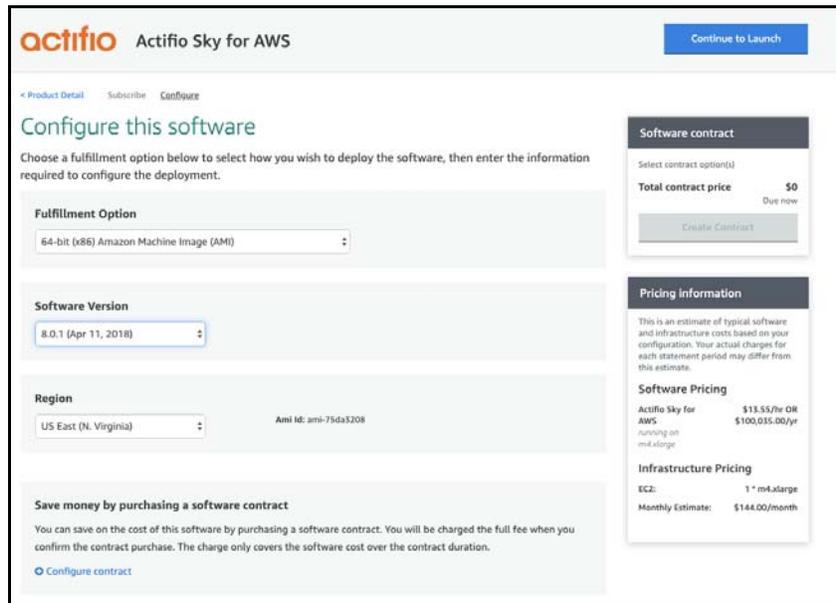

Download the calculator and enter the information about your data requirements. The calculator will return one of the recommended instance types (size) based on the amount of data and whether the Actifio Sky appliance will use dedup policies.

Dedup Policies Used		Dedup Policies Not Used	
Instance Type	Actifio Sky Model	Instance Type	Actifio Sky Model
m5.xlarge	5 TB	M5.2XLarge	60 TB
m5.2xlarge	10 TB	M5.4XLarge	120 TB
m5.4xlarge	30 TB	M5.8XLarge	200 TB
r5.8xlarge	128 TB	--	--

**Note:** These sizes are the minimum sizes required based on your Actifio Solution Calculator entries. You may use a larger size instance type as you see fit.

- b. Record the recommended size, you will need it when configuring the Actifio appliance.
  - c. Close the sizing page to go back to the product page.
6. Next, click **Continue to Subscription**. You will see the subscription options.

7. Click **Accept terms** and then select the instance type.
8. Next, accept the terms of the subscription and click **Continue to Configuration**.
9. Select the Fulfillment option and then select the Sky version and region to install the instance:
  - o **Fulfillment Option** - 64 bit (x86) Amazon machine Image (AMI)
  - o **Software Version** - Always select the latest version.
  - o **Region** - Select the region you want the Sky instance in.

10. Click **Continue to Launch**. The Launch this software page opens. Continue to [Launching Actifio Sky for AWS from the Marketplace](#) on page 6.

# Launching Actifio Sky for AWS from the Marketplace

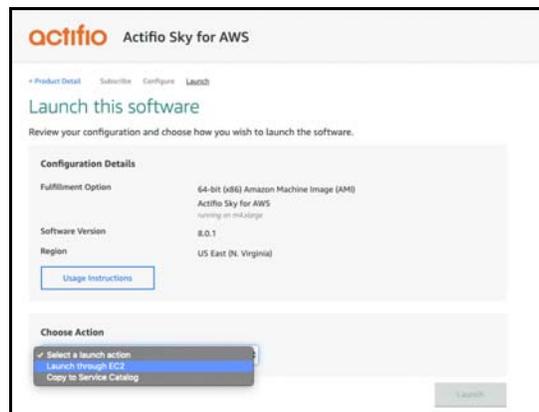

To launch Actifio Sky for AWS:

1. In the Launch this software page, select **Launch through EC2** from the Choose Action drop-down.

---

**Note:** The connection methods and port ranges are listed under the Launch with EC2 Console option. You will have the opportunity to adjust those settings during the configuration process.

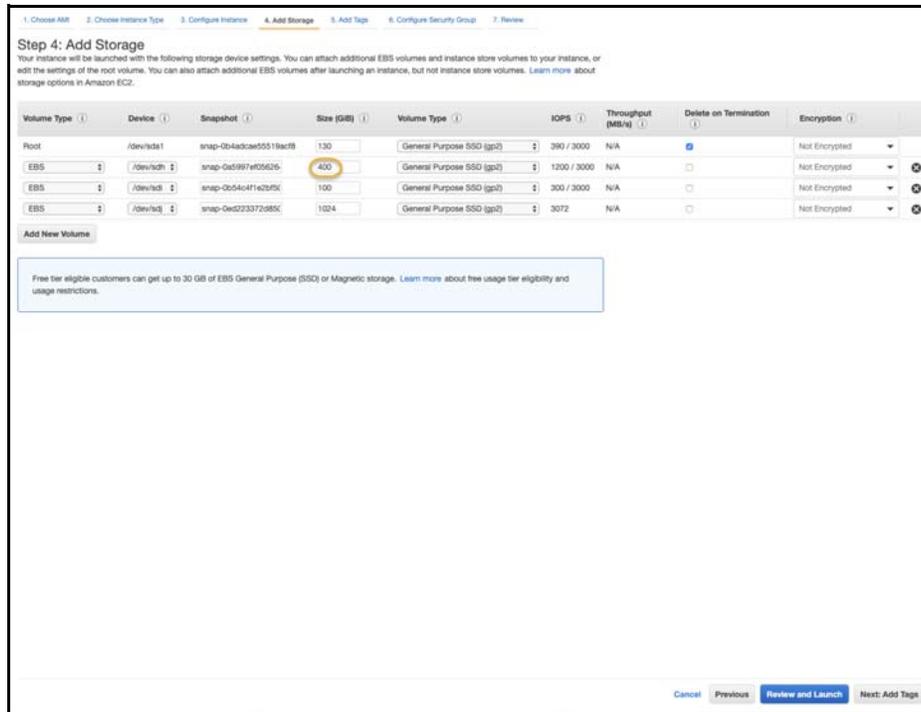

---

2. Click **Launch** to open the launch console for the region in which the Actifio Sky appliance will be installed. The Step 2: Choose an Instance Type page opens. The requirements for Step 1 were satisfied when you subscribed to the Actifio product in [Subscribe to an Actifio Sky Appliance Instance from the Marketplace](#) on page 3.
3. Select the Instance type to be used with the Actifio Sky appliance.

The size to be used was determined by the Actifio Solution Calculator. These sizes are the minimum sizes required based on your Actifio Solution Calculator entries. You may use a larger instance.

4. Click **Next: Configure Instance Details** and the Step 3: Configure Instance Details page opens.
5. Enter the configuration data:
  - o **Network:** From the drop down list, select the VPC (network) for the Actifio Sky instance.
  - o **Subnet:** From the drop-down list, select the subnet for the Actifio Sky instance.
  - o **Auto-assign Public IP:** From the drop down list, select **Enable** if this Actifio Sky instance requires access via the public Internet. This is not required if your IT infrastructure has a VPN.
6. Click **Next: Add Storage** and the Step 4 Add Storage page opens.

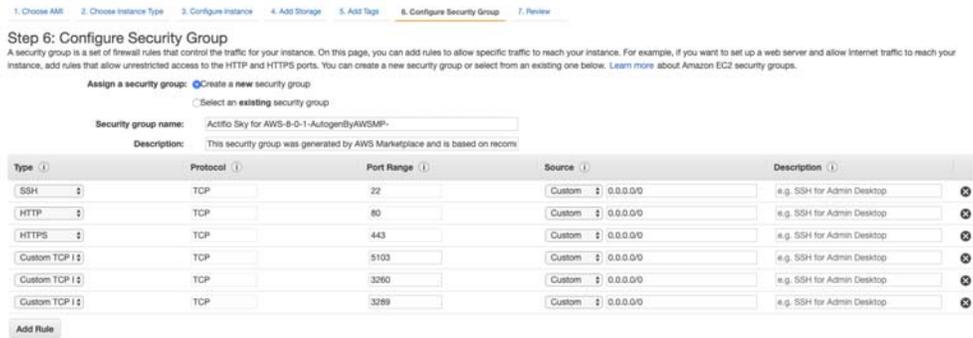

7. You will need four provisioned disks for the installation process:
- o 10 GB (minimum) for the Actifio Snapshot Pool.
  - o 200 GB disk for the Primary Pool.
  - o 100 GB (minimum) for the Actifio Dedup Pool. Actifio Sky appliances that will not use dedup policies must have a Dedup Pool with a minimum size of 1024GB.
  - o An SSD with a minimum of 5000 IOPS based on the size of your MDL:

Model	SSD Size	Optional/Required
50TB	512GB	Required
30TB	308GB	Required
10TB	103GB	Optional
5TB	53GB	Optional
1TB	1GB	Optional

Actifio Sky appliances that will not use dedup policies do not need to use SSDs.

8. Click **Next: Tag Instance** and the Step 5 Tag Instance page opens.
9. Create a tag for the Actifio Sky instance that is easy to remember and identify.
10. Click **Next: Configure Security Group** and the Step 6 Configure Security Group page opens.

11. Ensure that the Security Group is set as follows:

Type	Protocol	Port Range	Source	Custom TCP Rule
SSH	TCP	22	Anywhere	0.0.0/0
HTTPS	TCP	443	Anywhere	0.0.0/0
HTTP	TCP	80	Anywhere	0.0.0/0
Custom TCP Rule	TCP	5103	Anywhere	0.0.0/0
Custom TCP Rule	TCP	3260	Anywhere	0.0.0/0
Custom TCP Rule	TCP	3269	Anywhere	0.0.0/0

12. Click **Review and Launch** and a page opens detailing your selections and settings.
13. If the selections and settings are correct, click **Launch** and the Actifio Sky appliance is deployed.
14. Continue on to [Chapter 3, Upgrading Sky Appliance](#).

---

# 3 Upgrading a Sky Appliance

---

Use the instructions in this chapter to upgrade the Sky appliance you have launched (using instructions in [Launching Actifio Sky for AWS from the Marketplace](#) on page 6) to the latest recommended software version.

It has the following sections:

- [Obtain the Upgrade File](#) on page 11
- [Upgrade the Sky Appliance](#) on page 11

## Obtain the Upgrade File

Your customer support representative will provide you with the latest `patch-SKY-actifioversion.gpg` upgrade file. Place a copy of that file in a location that is easily accessible from your browser.

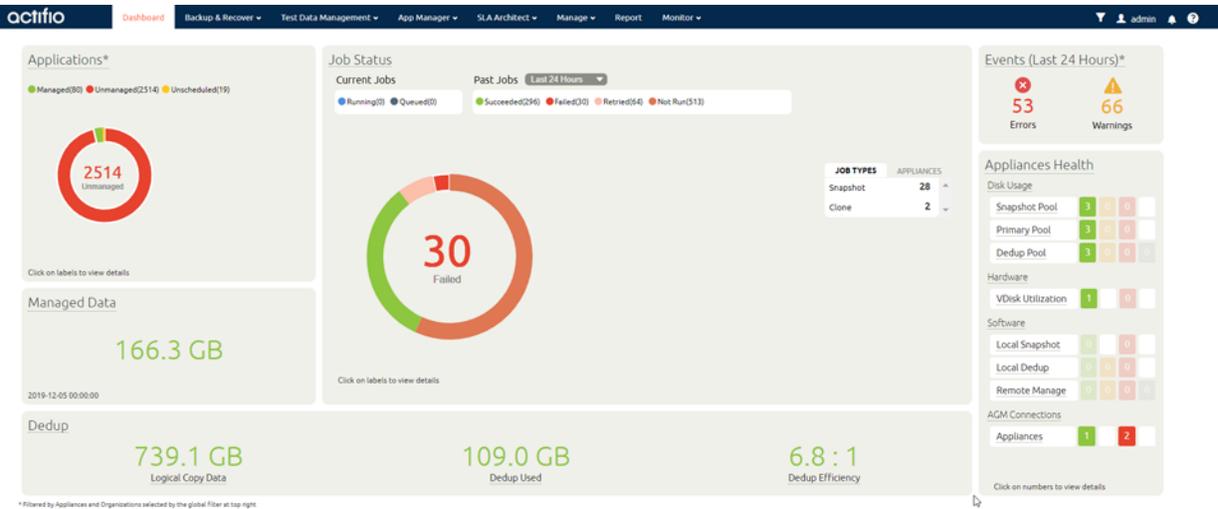

## Upgrade the Sky Appliance

To upgrade the Sky appliance:

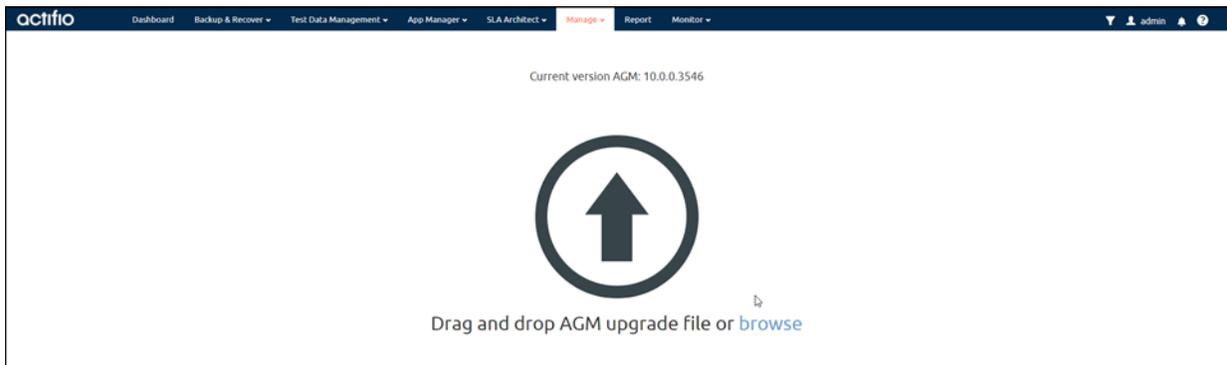

1. Open a browser and in the address space enter the Public IP address of the appliance:  
`https://<Public IP of the Sky>/appliancesetup`  
The Actifio Desktop login page opens.

2. Enter the login credentials:
  - o For **Username**, enter admin
  - o For **Password**, use the Instance ID. Like the Public IP, you can find the Instance ID in the EC2 instance's Description tab.
3. Click **Sign in** and the Actifio Dashboard opens. The Dashboard shows a high-level view of your appliance's status.

- From the AGM Dashboard, click the **Manage** tab and select **Upgrade** from the drop-down menu to upload the upgrade file. See [Obtain the Upgrade File](#) on page 11 for more information.

- Follow the prompts to install the upgrade file.  
When the upgrade is complete, a success message is displayed.

## Next Steps

Add the Sky appliance to an AGM using the instructions in the AGM online help topic “Adding an Appliance to AGM.” You can access the Online Help from AGM. After you add the appliance, you can manage it from AGM.
